Fig. 1

Thyone™-500, Given Orally, Markedly Raises Glutathione Levels Inside the Immune Cells of HIV Positive People.

| Dosage Regimen | Responders | Percent Increases |
|-------------------|--------------------------------------|-------------------|
| 3 grams/day | 100% | |
| 1.5 grams, 2x/day | 6 out of 6 people Average Ranges: | 53% - 99% |
| 2 grams/day | 75% | |
| 1.0 grams, 2x/day | 6 out of 8 people Average Ranges: | 42% - 87% |
| 1 gram/day | 40% | |
| 0.5 grams, 2x/day | 2 out of 5 people Average Ranges: | 8% - 60% |

These results show a dose-response effect in that 3 grams/day result in positive responses, in more people, and the responses are greater...compared to 2 grams/day, and 1 gram/day.

The examples of marked rises of glutathione are graphically shown in the two attached graphs. Extensive tests were done to plot the baselines.

The three tables that follow show the individual results, according to dosage regimens.
